ABSTRACTED-PUB-NO: DE 10065075A

BASIC-ABSTRACT:

NOVELTY - Mixture contains (in wt.%) 60-90 vermiculite, 5-20 phosphate binder, 5-20 water, 0-6 highly dispersed metal oxide, 0-10 clay, and 0.5-15 of a combination of inorganic silicates.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for a process for the production of a molded part.

Preferred Features: The mixture contains 76.0 vermiculite, 9.0 phosphate binder, 9.0 water, 1.0 highly dispersed metal oxide, 1.5 clay, and 3.5 of a combination of inorganic silicates. The phosphate binder is made from aluminum phosphate, magnesium phosphate, sodium aluminum phosphate, boron phosphate, chromium phosphate, phosphoric acid, and/or polyphosphate. The highly dispersed metal oxide is silicic acid, aluminum oxide or zirconium oxide.

USE - Used in the production of molded parts (claimed).

ADVANTAGE - The parts produced have high strength, good heat insulating properties and good electrical insulating properties.
